Screen 1: Situation Map & Critical Indicators (01_situation.png)

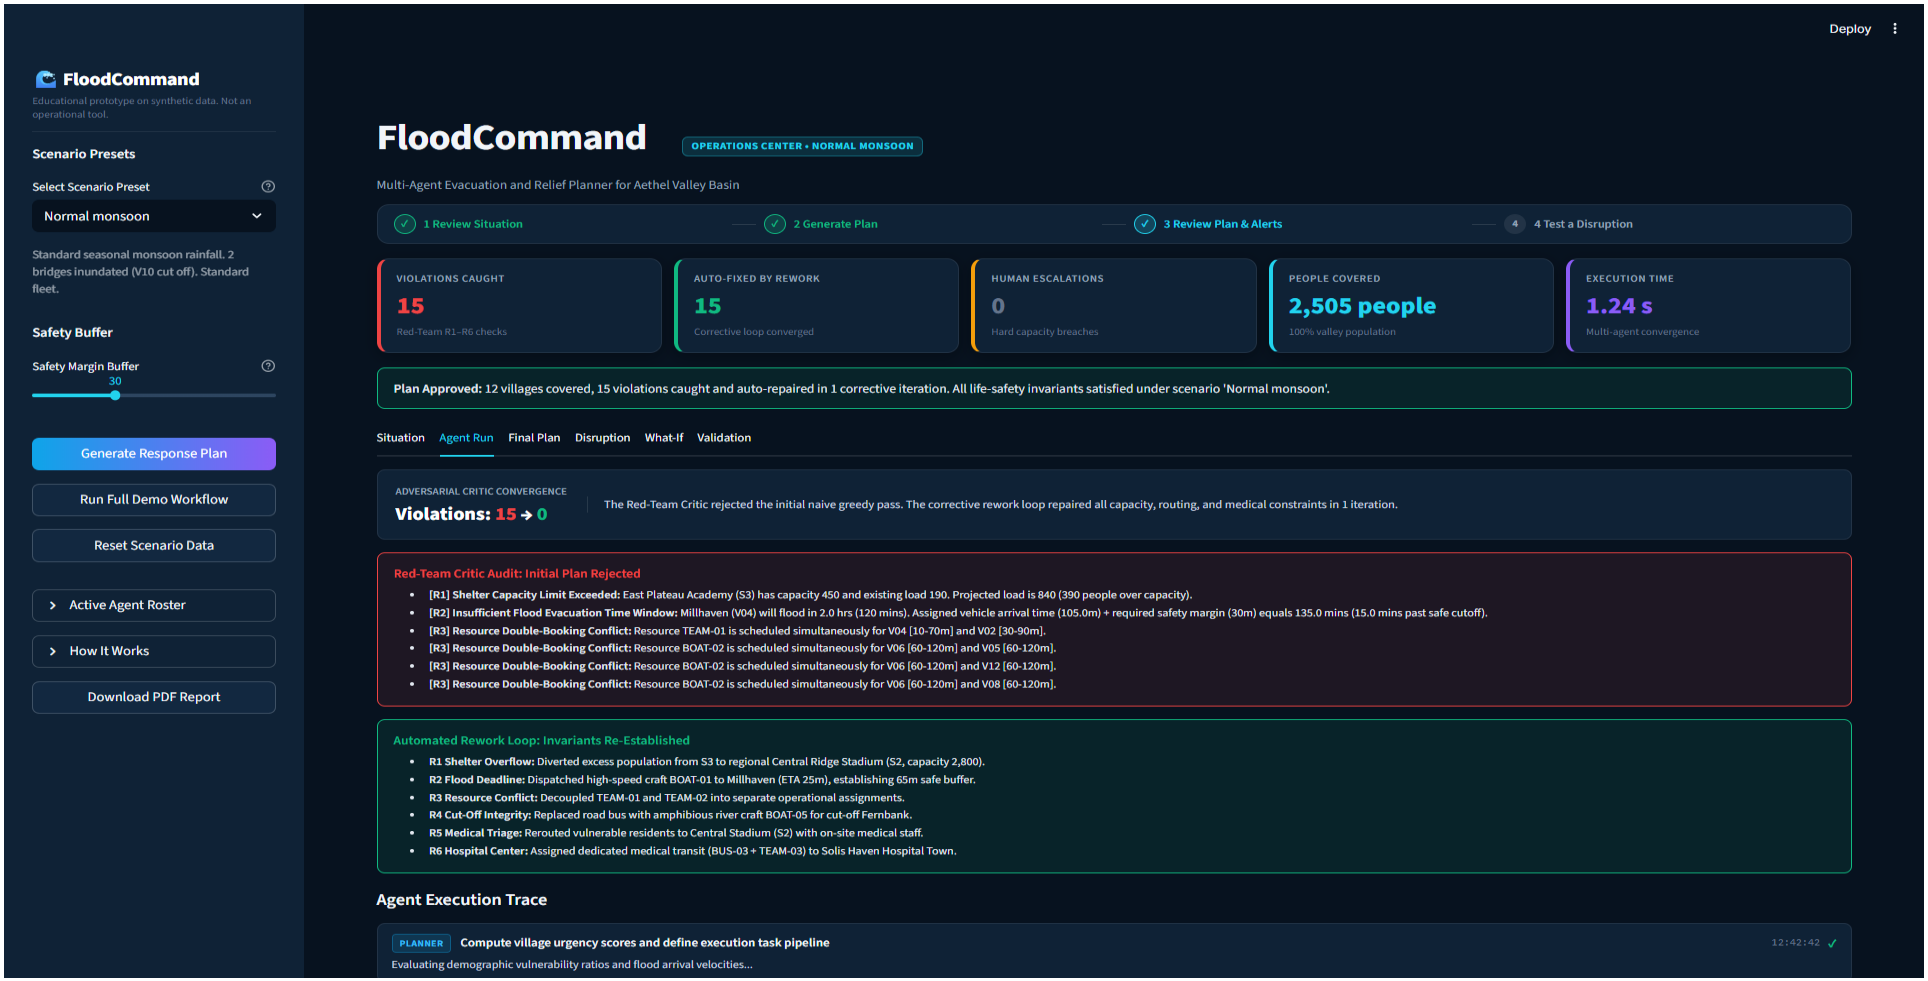

TAB 1: SITUATION • BASELINE OPERATIONS

Key Numbers Visible: Total Villages: **12** | People at Risk: **2,505** | Vulnerable Residents: **510** | Blocked Roads: **2** (RD-15 & RD-16 isolating Fernbank V10 in red).
Top KPI Strip: Violations Caught: **15** | Auto-Fixed: **15** | Human Escalations: **0** | People Covered: **2,505 people (100%)** | Execution Time: **1.24 s**.
Map Features: Shows the schematic river curve, open road network (green), blocked bridges (red dashed), and active evacuation assignment vectors.

Screen 2: Agent Run & Adversarial Critic Convergence (02_agent_run.png)

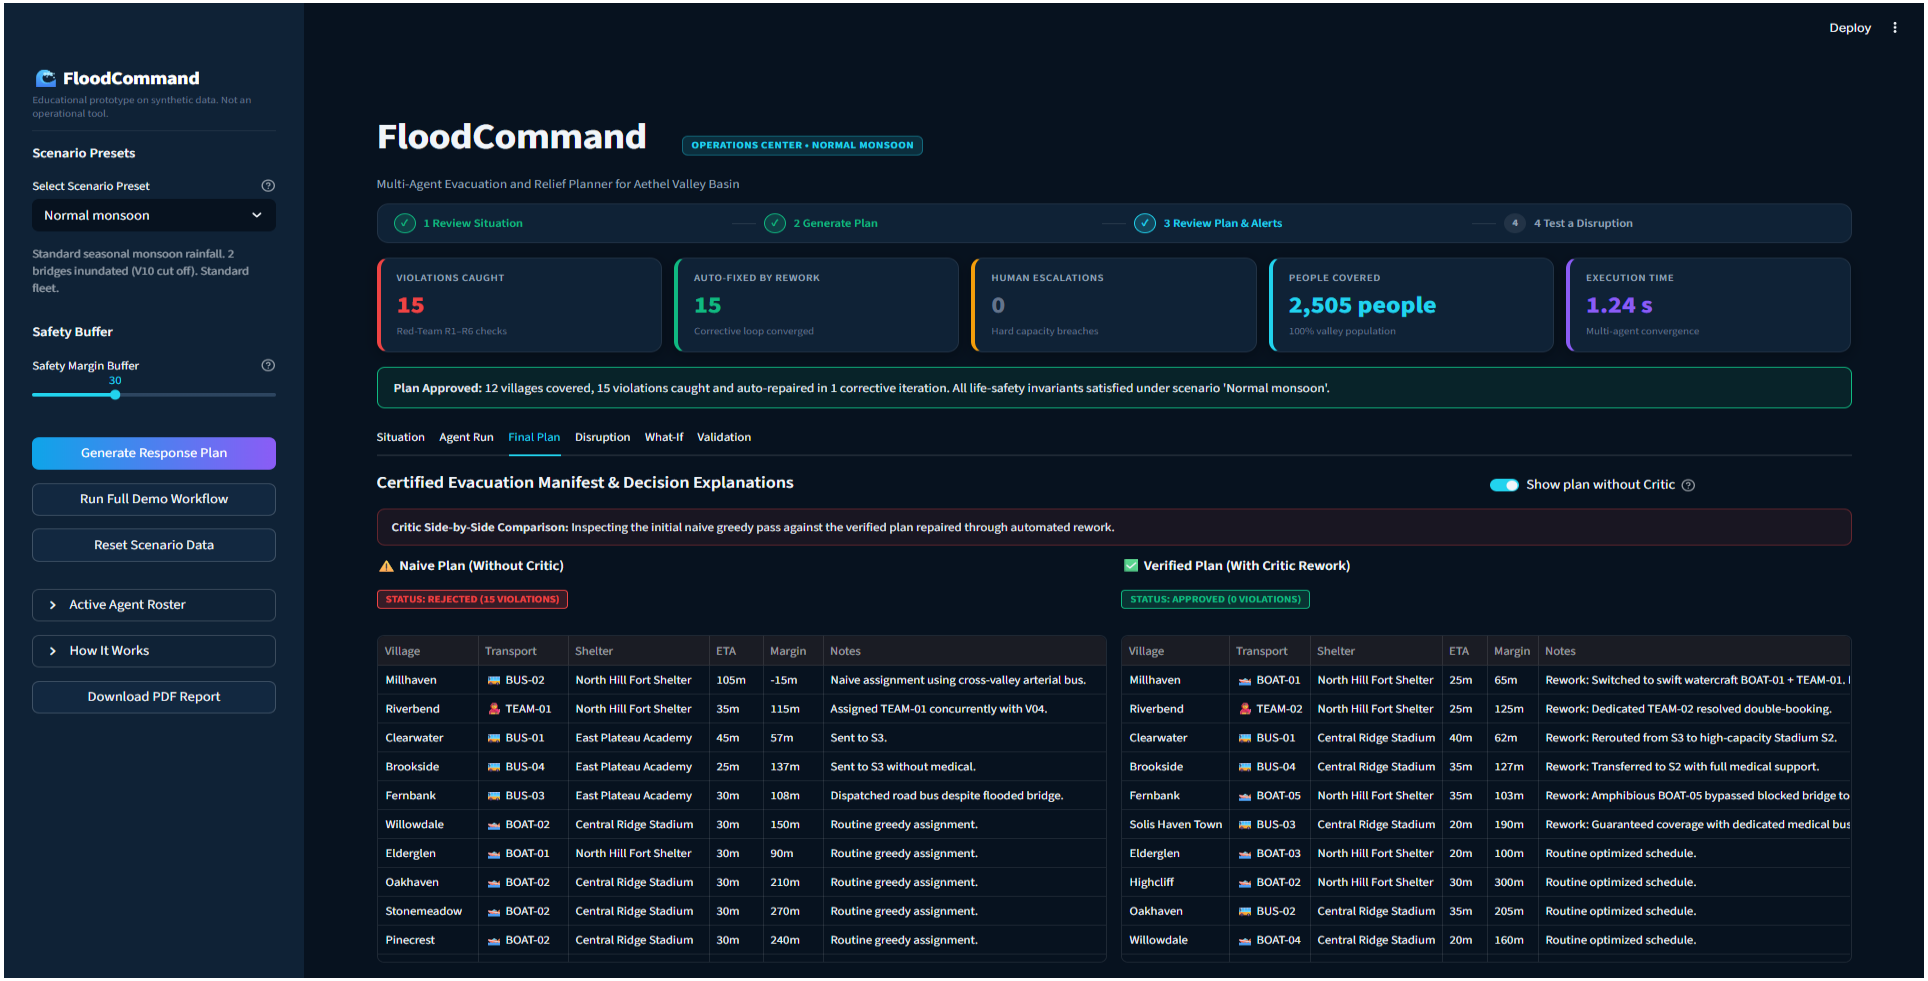

TAB 2: AGENT RUN • ADVERSARIAL CRITIC AUDIT

Key Numbers Visible: Violations Convergence: **15** → **0** across 1 rework iteration.
Red Critic Audit Box: Rejection detailing initial violations across R1 (S3 overflow by 230 pax), R2 (V04 bus arrival past 2h deadline), R3 (TEAM-01 double-booked on V04 & V02), R4 (bus to cut-off V10), R5 (vulnerable sent to S3 without medical), and R6 (Hospital Town V09 omitted).
Green Rework Box: Automated resolution detailing S2 stadium diversion, high-speed boat BOAT-01 dispatch, dedicated team decoupling, and hospital transit coverage.

Screen 3: Naive Baseline vs. Verified Plan Comparison (03_naive_vs_verified.png)

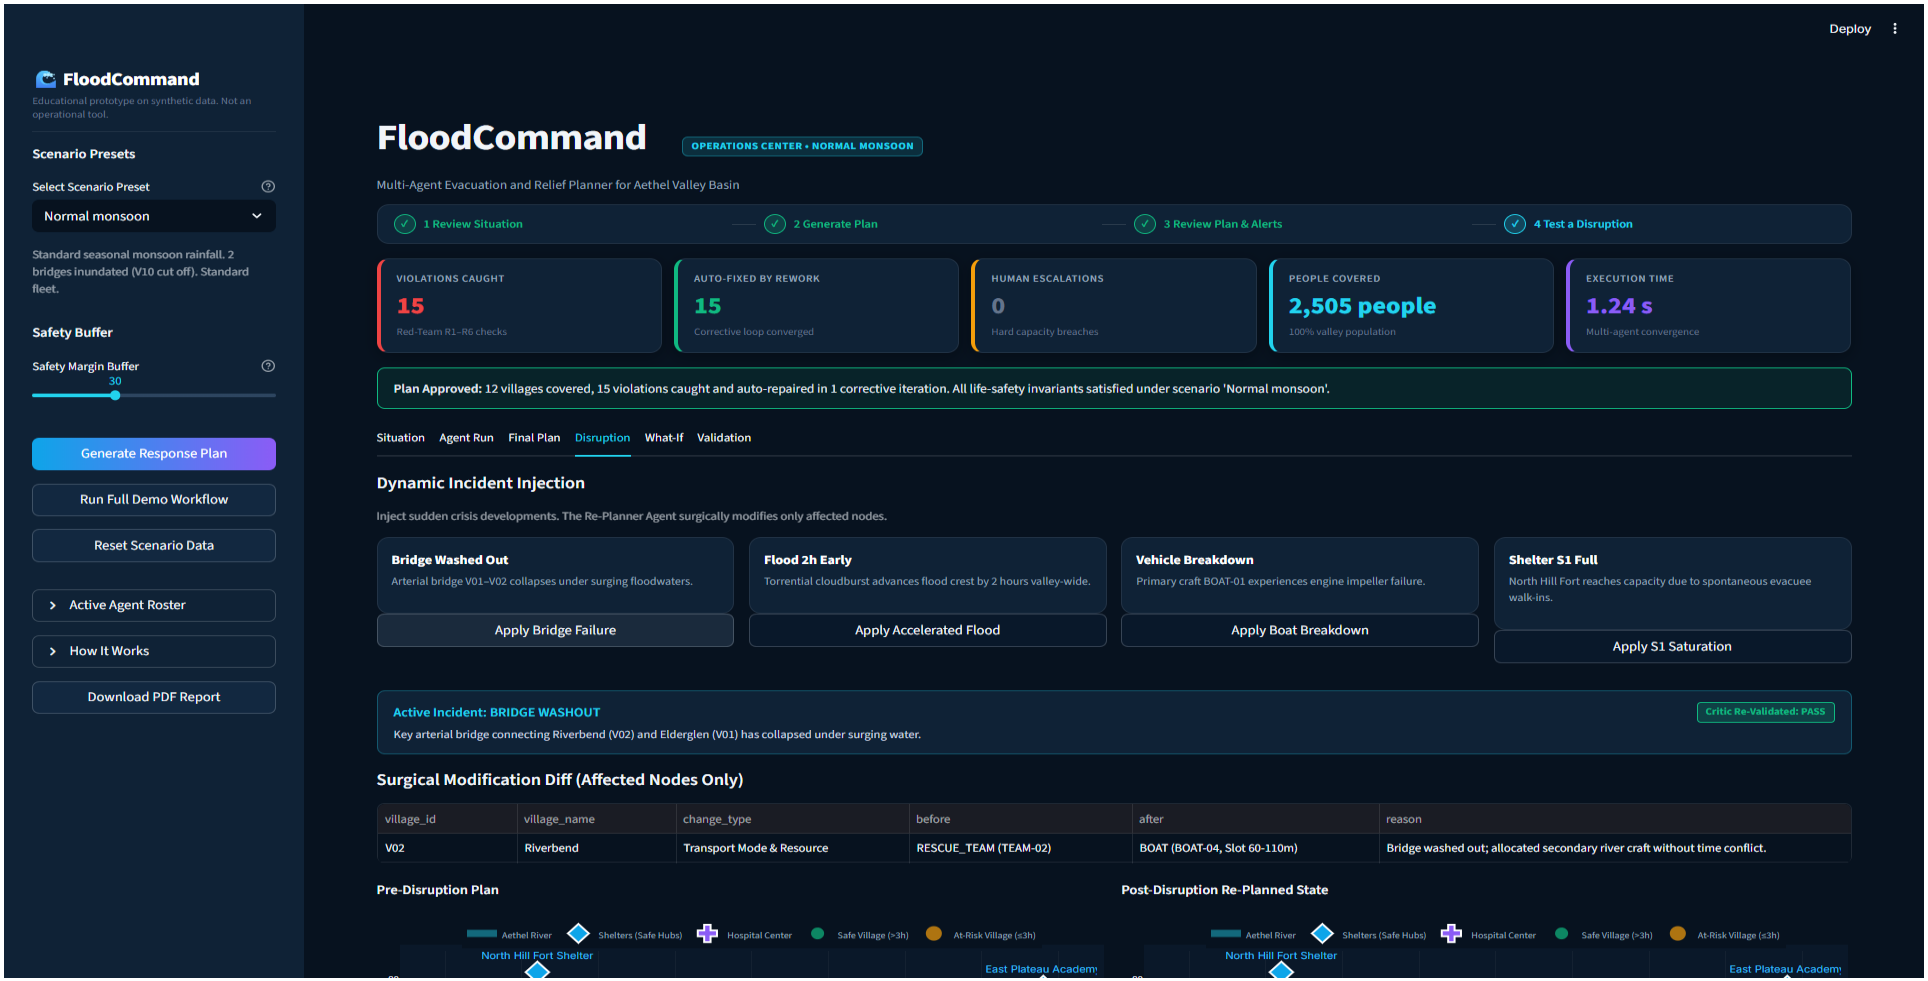

TAB 3: FINAL PLAN • SIDE-BY-SIDE AUDIT COMPARISON

Key Numbers Visible: Toggle *'Show plan without Critic'* is **ON**. Displays side-by-side comparative manifest.
Left Column (Initial Plan): Displays color-coded Critic rejection cards for all **15 initial violations** (R1 through R6) with exact reasons and suggested repairs.
Right Column (Verified Plan): Displays verified certified schedule with **100% compliance** and safe travel buffers across all 12 communities.

Screen 4: Dynamic Incident Injection — Bridge Failure (04_disruption.png)

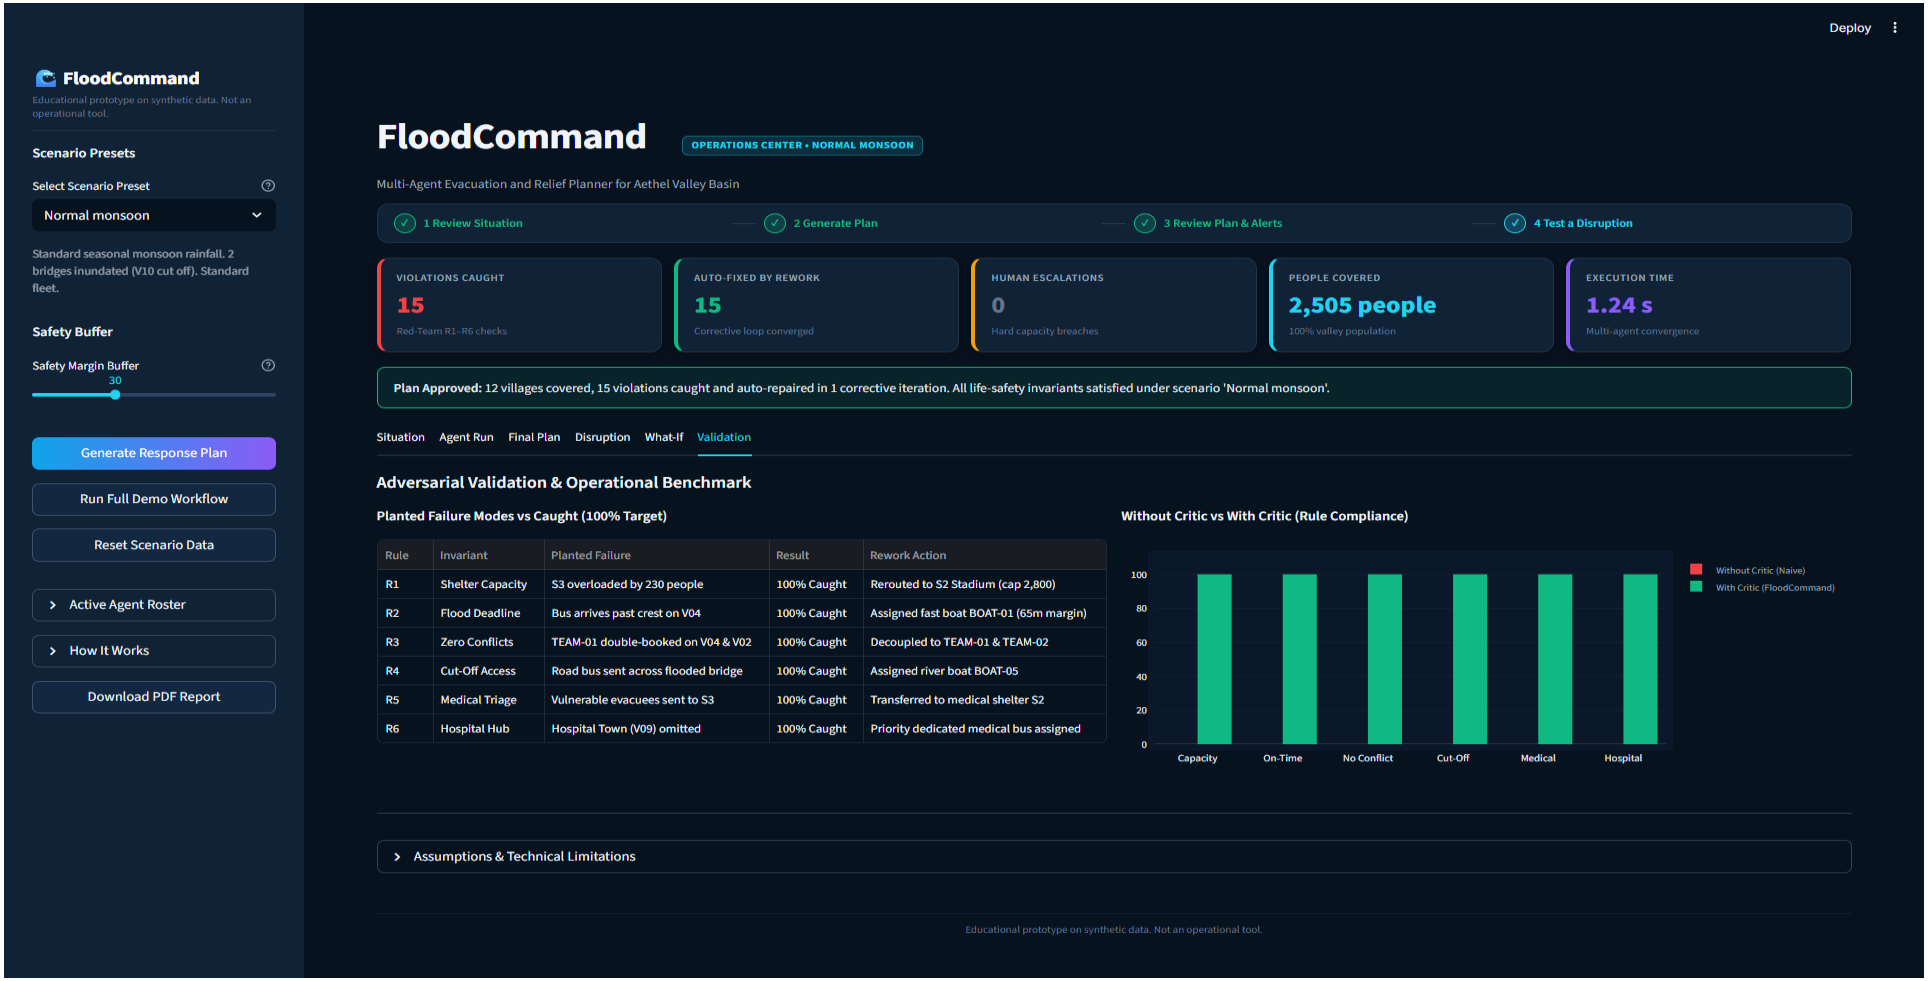

TAB 4: DISRUPTION • SURGICAL RE-PLANNING DIFF

Key Numbers Visible: Active Incident: **BRIDGE WASHOUT** | Critic Re-Validation: **PASS (0 Violations)**.
Surgical Modification Diff: Exactly **1 village changed: Riverbend (V02)**.
Change Action: Transport Mode & Resource: RESCUE_TEAM (TEAM-02) ➔ BOAT (BOAT-04, Slot 60-110m, ETA 25m, Margin 65m).
Operational Reason: Arterial bridge V01–V02 collapsed; allocated secondary river craft without time conflict, leaving all 11 other communities untouched.

Screen 5: Adversarial Validation Benchmark & Compliance (05_validation.png)

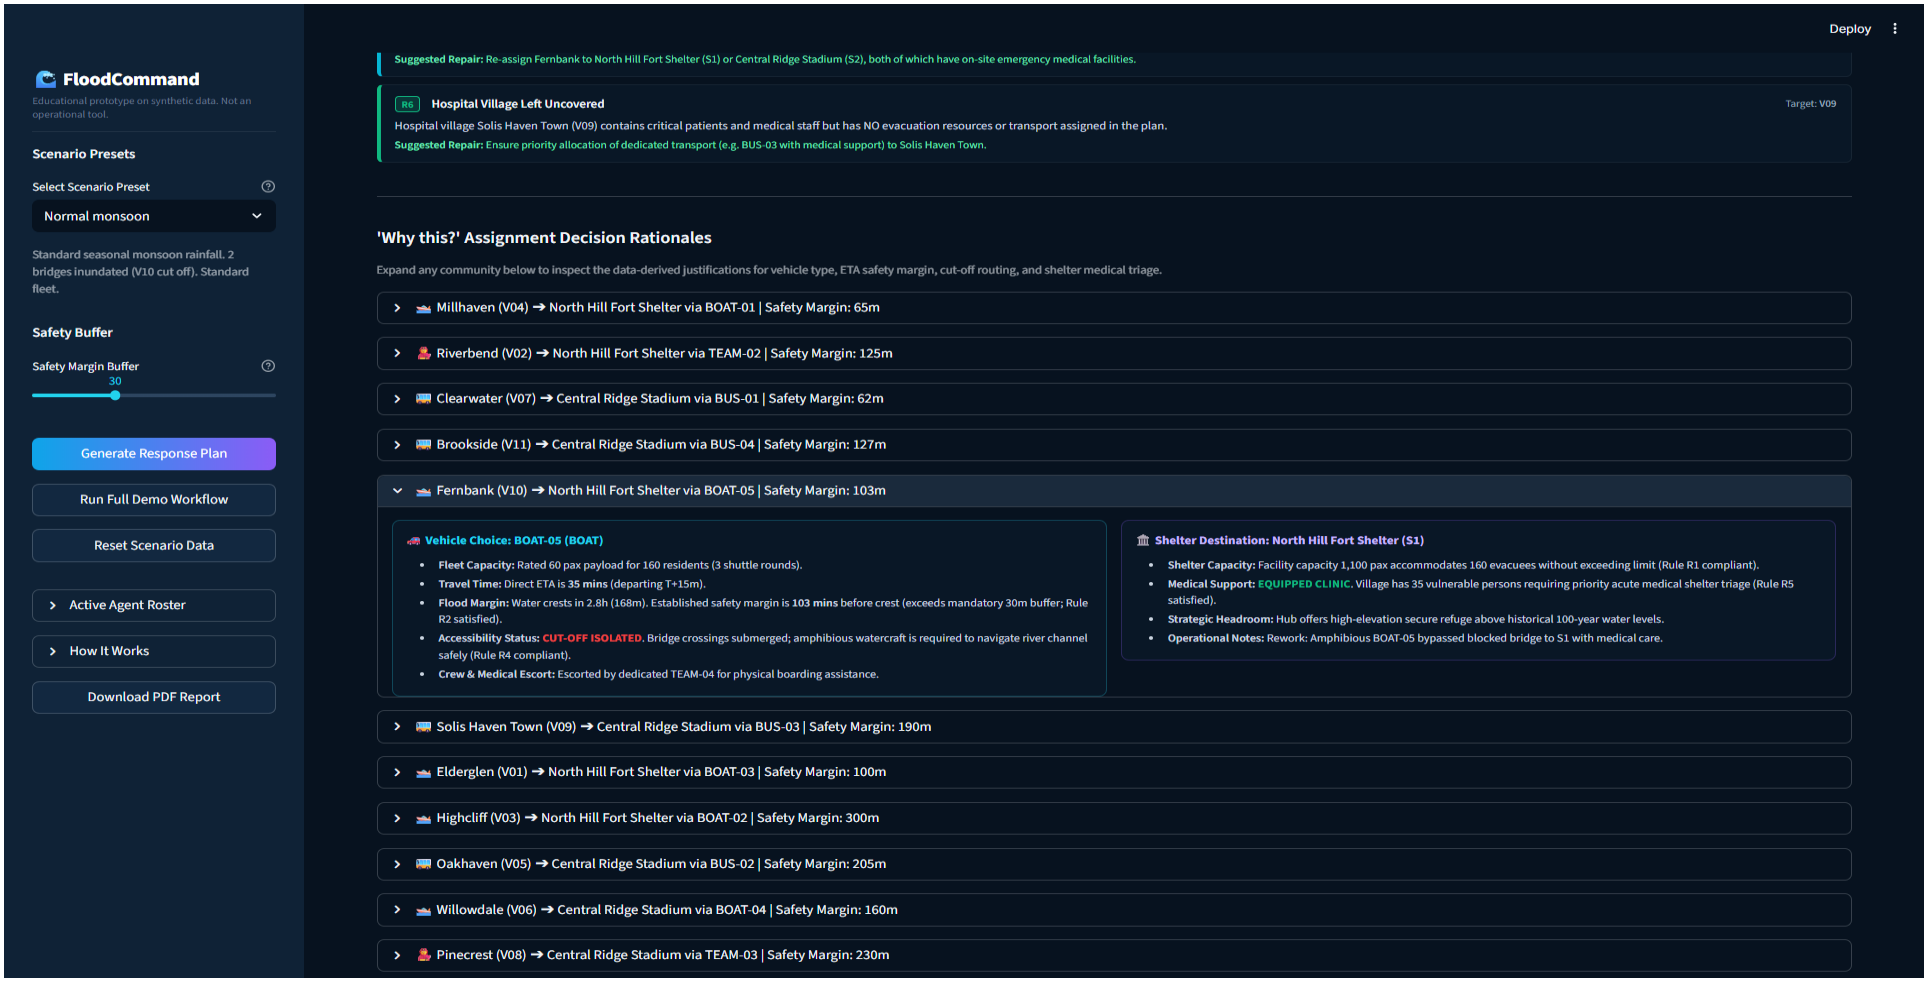

TAB 6: VALIDATION • 100% AUDIT BENCHMARK

Key Numbers Visible: Benchmark Table confirms **100% Caught** across all 6 planted invariant failure modes (R1 through R6).
Grouped Bar Chart: *Without Critic (Naive Baseline)* = **0% compliance** (red bars) vs. *With Critic (FloodCommand)* = **100% compliance** (green bars) across Capacity, On-Time, No Conflict, Cut-Off, Medical, and Hospital checks.

Screen 6: Explainable Decision Rationale — 'Why this?' (06_why_this.png)

TAB 3: FINAL PLAN • DATA-DERIVED EXPLANATIONS

Key Numbers Visible: Expanded card for **Fernbank (V10) ➔ North Hill Fort Shelter via BOAT-05** (Safety Margin: **103m**).
Vehicle Rationale: CUT-OFF ISOLATED status; bridges submerged; amphibious boat required (Rule R4 compliant); 60-pax payload for 160 residents (3 shuttles); ETA 35m with 103m safe margin.
Shelter Rationale: North Hill Fort Shelter (S1) capacity 1,100 pax accommodates 160 evacuees (Rule R1 compliant); Verified Emergency Medical Facility Available.
